## Chapter 4

# pvauthor\_engine Data Structure Documentation

### 4.1 CPVCmnAsyncEvent Class Reference

```
#include <pv_common_types.h>
```

Inheritance diagram for CPVCmnAsyncEvent::

#### Public Methods

- [CPVCmnAsyncEvent](#) ([TPVCmnEventType](#) aEventType, [TPVCmnExclusivePtr](#) aExclusivePtr, const uint8 \*aLocalBuffer=NULL, uint32 aLocalBufSize=0, [TPVCmnResponseType](#) aResponseType=NULL)
- [~CPVCmnAsyncEvent](#) ()
- [TPVCmnEventType](#) [GetEventType](#) () const
- void [GetEventData](#) ([TPVCmnExclusivePtr](#) &aPtr) const
- uint8 \* [GetLocalBuffer](#) ()

#### Protected Attributes

- [TPVCmnEventType](#) iEventType
- [TPVCmnExclusivePtr](#) iExclusivePtr
- uint8 [iLocalBuffer](#) [PV\_COMMON\_ASYNC\_EVENT\_LOCAL\_BUF\_SIZE]

#### 4.1.1 Detailed Description

CPVCmnAsyncEvent Class

CPVCmnAsyncEvent is the base class used to pass unsolicited error and informational indications to the user. Additional information can be tagged based on the specific event

### 4.1.2 Constructor & Destructor Documentation

**4.1.2.1** CPVCmnAsyncEvent::CPVCmnAsyncEvent ([TPVCmnEventType](#) *aEventType*, [TPVCmnExclusivePtr](#) *aExclusivePtr*, const uint8 \* *aLocalBuffer* = NULL, uint32 *aLocalBufSize* = 0, [TPVCmnResponseType](#) *aResponseType* = NULL) [inline]

**4.1.2.2** CPVCmnAsyncEvent::~~CPVCmnAsyncEvent () [inline]

### 4.1.3 Member Function Documentation

**4.1.3.1** void CPVCmnAsyncEvent::GetEventData ([TPVCmnExclusivePtr](#) & *aPtr*) const [inline]

**Returns:**

Returns the opaque data associated with the event.

**4.1.3.2** [TPVCmnEventType](#) CPVCmnAsyncEvent::GetEventType () const [inline]

**Returns:**

Returns the Event type that has been received

**4.1.3.3** uint8\* CPVCmnAsyncEvent::GetLocalBuffer () [inline]

**Returns:**

Returns the local data associated with the event.

### 4.1.4 Field Documentation

**4.1.4.1** [TPVCmnEventType](#) CPVCmnAsyncEvent::iEventType [protected]

**4.1.4.2** [TPVCmnExclusivePtr](#) CPVCmnAsyncEvent::iExclusivePtr [protected]

**4.1.4.3** uint8 CPVCmnAsyncEvent::iLocalBuffer[PV\_COMMON\_ASYNC\_EVENT\_LOCAL\_BUF\_SIZE] [protected]

The documentation for this class was generated from the following file:

- [pv\\_common\\_types.h](#)

## 4.2 CPVCmnCmdResp Class Reference

```
#include <pv_common_types.h>
```

Inheritance diagram for CPVCmnCmdResp::

### Public Methods

- [CPVCmnCmdResp](#) ([TPVCmnCommandType](#) aType, [TPVCmnCommandId](#) aId, void \*aContext, [TPVCmnCommandStatus](#) aStatus, void \*aResponseData=NULL, int aResponseDataSize=0, [TPVCmnResponseType](#) aResponseType=NULL)
- [TPVCmnCommandType](#) [GetCmdType](#) () const
- [TPVCmnCommandId](#) [GetCmdId](#) () const
- void \* [GetContext](#) () const
- [TPVCmnCommandStatus](#) [GetCmdStatus](#) () const
- void \* [GetResponseData](#) () const
- int [GetResponseDataSize](#) () const

### Protected Attributes

- [TPVCmnCommandType](#) iCmdType
- [TPVCmnCommandId](#) iCmdId
- void \* iContext
- [TPVCmnCommandStatus](#) iStatus
- void \* iResponseData
- int iResponseDataSize

### 4.2.1 Constructor & Destructor Documentation

- 4.2.1.1** [CPVCmnCmdResp::CPVCmnCmdResp](#) ([TPVCmnCommandType](#) aType, [TPVCmnCommandId](#) aId, void \* aContext, [TPVCmnCommandStatus](#) aStatus, void \* aResponseData = NULL, int aResponseDataSize = 0, [TPVCmnResponseType](#) aResponseType = NULL) [inline]

Constructor for CPVCmnCmdResp

### 4.2.2 Member Function Documentation

- 4.2.2.1** [TPVCmnCommandId](#) [CPVCmnCmdResp::GetCmdId](#) () const [inline]

**Returns:**

Returns the unique ID associated with a command of this type.

**4.2.2.2 TPVCmnCommandStatus** CPVCmnCmdResp::GetCmdStatus () const [inline]**Returns:**

Returns the completion status of the command

**4.2.2.3 TPVCmnCommandType** CPVCmnCmdResp::GetCmdType () const [inline]**Returns:**

Returns the command type that is being completed.

**4.2.2.4 void\*** CPVCmnCmdResp::GetContext () const [inline]**Returns:**

Returns the opaque data that was passed in with the command.

**4.2.2.5 void\*** CPVCmnCmdResp::GetResponseData () const [inline]**Returns:**

Returns additional data associated with the command. This is to be interpreted based on the command type and the return status

**4.2.2.6 int** CPVCmnCmdResp::GetResponseDataSize () const [inline]**4.2.3 Field Documentation****4.2.3.1 TPVCmnCommandId** CPVCmnCmdResp::iCmdId [protected]**4.2.3.2 TPVCmnCommandType** CPVCmnCmdResp::iCmdType [protected]**4.2.3.3 void\*** CPVCmnCmdResp::iContext [protected]**4.2.3.4 void\*** CPVCmnCmdResp::iResponseData [protected]**4.2.3.5 int** CPVCmnCmdResp::iResponseDataSize [protected]**4.2.3.6 TPVCmnCommandStatus** CPVCmnCmdResp::iStatus [protected]

The documentation for this class was generated from the following file:

- [pv\\_common\\_types.h](#)

## 4.3 CPVCmnInterfaceCmdMessage Class Reference

```
#include <pv_interface_cmd_message.h>
```

### Public Methods

- [CPVCmnInterfaceCmdMessage](#) (int aType, OsclAny \*aContextData)
- [CPVCmnInterfaceCmdMessage](#) ()
- virtual [~CPVCmnInterfaceCmdMessage](#) ()
- [PVCommandId](#) [GetCommandId](#) ()
- int [GetType](#) ()
- OsclAny \* [GetContextData](#) ()
- int [compare](#) (CPVCmnInterfaceCmdMessage \*a, CPVCmnInterfaceCmdMessage \*b) const
- int32 [GetPriority](#) () const
- void [SetId](#) ([PVCommandId](#) aId)

### Protected Attributes

- [PVCommandId](#) iId
- int iType
- int32 iPriority
- OsclAny \* iContextData

### Friends

- class [PVInterfaceProxy](#)
- int32 [operator<](#) (const CPVCmnInterfaceCmdMessage &a, const CPVCmnInterfaceCmdMessage &b)

### 4.3.1 Detailed Description

CPVInterfaceCmdMessage Class

CPVInterfaceCmdMessage is the interface to the pv2way SDK, which allows initialization, control, and termination of a two-way terminal. The application is expected to contain and maintain a pointer to the CPV2WayInterface instance at all times that a call is active. The CPV2WayFactory factory class is to be used to create and delete instances of this class

## 4.3.2 Constructor & Destructor Documentation

**4.3.2.1** CPVCmdInterfaceCmdMessage::CPVCmdInterfaceCmdMessage (int *aType*, OsciAny \* *aContextData*) [inline]

**4.3.2.2** CPVCmdInterfaceCmdMessage::CPVCmdInterfaceCmdMessage () [inline]

**4.3.2.3** virtual CPVCmdInterfaceCmdMessage::~CPVCmdInterfaceCmdMessage () [inline, virtual]

## 4.3.3 Member Function Documentation

**4.3.3.1** int CPVCmdInterfaceCmdMessage::compare (CPVCmdInterfaceCmdMessage \* *a*, CPVCmdInterfaceCmdMessage \* *b*) const [inline]

The algorithm used in OsciPriorityQueue needs a compare function that returns true when A's priority is less than B's

**Returns:**

true if A's priority is less than B's, else false

**4.3.3.2** [PVCommandId](#) CPVCmdInterfaceCmdMessage::GetCommandId () [inline]

**4.3.3.3** OsciAny\* CPVCmdInterfaceCmdMessage::GetContextData () [inline]

**4.3.3.4** int32 CPVCmdInterfaceCmdMessage::GetPriority () const [inline]

**4.3.3.5** int CPVCmdInterfaceCmdMessage::GetType () [inline]

**4.3.3.6** void CPVCmdInterfaceCmdMessage::SetId ([PVCommandId](#) *aId*) [inline]

## 4.3.4 Friends And Related Function Documentation

**4.3.4.1** int32 operator< (const CPVCmdInterfaceCmdMessage & *a*, const CPVCmdInterfaceCmdMessage & *b*) [friend]

**4.3.4.2** friend class PVInterfaceProxy [friend]

## 4.3.5 Field Documentation

**4.3.5.1** OsciAny\* CPVCmdInterfaceCmdMessage::iContextData [protected]

**4.3.5.2** [PVCommandId](#) CPVCmdInterfaceCmdMessage::iId [protected]

**4.3.5.3** int32 CPVCmdInterfaceCmdMessage::iPriority [protected]

**4.3.5.4** int CPVCmdInterfaceCmdMessage::iType [protected]

The documentation for this class was generated from the following file:

- [pv\\_interface\\_cmd\\_message.h](#)

## 4.4 CPVCmnInterfaceObserverMessage Class Reference

```
#include <pv_common_types.h>
```

Inheritance diagram for CPVCmnInterfaceObserverMessage::

### Public Methods

- [CPVCmnInterfaceObserverMessage \(\)](#)
- [CPVCmnInterfaceObserverMessage \(TPVCmnResponseType aResponseType\)](#)

### 4.4.1 Detailed Description

CPVCmnInterfaceObserverMessage Class

CPVCmnInterfaceObserverMessage is the interface to the pv2way SDK, which allows initialization, control, and termination of a two-way terminal. The application is expected to contain and maintain a pointer to the CPV2WayInterface instance at all times that a call is active. The CPV2WayFactory factory class is to be used to create and delete instances of this class

## 4.4.2 Constructor & Destructor Documentation

4.4.2.1 CPVCmnInterfaceObserverMessage::CPVCmnInterfaceObserverMessage () [inline]

4.4.2.2 CPVCmnInterfaceObserverMessage::CPVCmnInterfaceObserverMessage  
(TPVCmnResponseType aResponseType) [inline]

4.4.2.3 virtual CPVCmnInterfaceObserverMessage::~CPVCmnInterfaceObserverMessage ()  
[inline, virtual]

## 4.4.3 Member Function Documentation

4.4.3.1 virtual int CPVCmnInterfaceObserverMessage::GetPriority () const [inline,  
virtual]

4.4.3.2 TPVCmnResponseType CPVCmnInterfaceObserverMessage::GetResponseType () const  
[inline]

## 4.4.4 Field Documentation

4.4.4.1 int CPVCmnInterfaceObserverMessage::iOrder

4.4.4.2 int CPVCmnInterfaceObserverMessage::iPriority

4.4.4.3 TPVCmnResponseType CPVCmnInterfaceObserverMessage::iResponseType

The documentation for this class was generated from the following file:

- [pv\\_common\\_types.h](#)

## 4.5 CPVCmnInterfaceObserverMessageCompare Class Reference

```
#include <pv_common_types.h>
```

### Public Methods

- `int compare (CPVCmnInterfaceObserverMessage *a, CPVCmnInterfaceObserverMessage *b) const`

### 4.5.1 Member Function Documentation

**4.5.1.1** `int CPVCmnInterfaceObserverMessageCompare::compare (CPVCmn-InterfaceObserverMessage * a, CPVCmnInterfaceObserverMessage * b) const`  
[inline]

The documentation for this class was generated from the following file:

- [pv\\_common\\_types.h](#)

## 4.6 CPVMMFPointerBuffer Class Reference

```
#include <pv_plugin_interfaces.h>
```

Inheritance diagram for CPVMMFPointerBuffer::

### Public Methods

- [~CPVMMFPointerBuffer](#) ()
- virtual TDes8 & [Data](#) ()
- virtual const TDesC8 & [Data](#) () const
- virtual void [SetRequestSizeL](#) (TInt aSize)
- virtual TUint [BufferSize](#) () const
- void [SetData](#) (TUint8 \*aData, TInt aLength)
- void [SetFrameSize](#) (const TSize &size)
- virtual TSize [GetFrameSize](#) () const

### Static Public Methods

- CPVMMFPointerBuffer \* [NewL](#) ()

### 4.6.1 Constructor & Destructor Documentation

**4.6.1.1** CPVMMFPointerBuffer::~CPVMMFPointerBuffer () [inline]

### 4.6.2 Member Function Documentation

**4.6.2.1** virtual TUint CPVMMFPointerBuffer::BufferSize () const [inline, virtual]

**4.6.2.2** virtual const TDesC8& CPVMMFPointerBuffer::Data () const [inline, virtual]

**4.6.2.3** virtual TDes8& CPVMMFPointerBuffer::Data () [inline, virtual]

**4.6.2.4** virtual TSize CPVMMFPointerBuffer::GetFrameSize () const [inline, virtual]

Implements [MPVYuvFrameBuffer](#).

**4.6.2.5** CPVMMFPointerBuffer\* CPVMMFPointerBuffer::NewL () [inline, static]

**4.6.2.6** void CPVMMFPointerBuffer::SetData (TUint8 \* *aData*, TInt *aLength*) [inline]

**4.6.2.7** void CPVMMFPointerBuffer::SetFrameSize (const TSize & *size*) [inline]

**4.6.2.8** virtual void CPVMMFPointerBuffer::SetRequestSizeL (TInt *aSize*) [inline, virtual]

The documentation for this class was generated from the following file:

- [pv\\_plugin\\_interfaces.h](#)

## 4.7 MPVAudioInput Class Reference

```
#include <pv_plugin_interfaces.h>
```

### Public Methods

- virtual IMPORT\_C void [SetFormatL](#) (const TDesC8 &aFormat, const TDesC8 &aFmtSpecific, TInt &aMaxRequestSize)=0
- virtual IMPORT\_C void [SetConfigL](#) (const TDesC8 &aSampleRate, const TDesC8 &aChannels)=0
- virtual IMPORT\_C void [CancelCommand](#) ()=0
- virtual IMPORT\_C TInt [Reset](#) ()=0

### 4.7.1 Detailed Description

MPVAudioInput Class

MPVAudioInput can be implemented by any audio data source that needs to work with PV SDKs.

### 4.7.2 Member Function Documentation

**4.7.2.1** virtual IMPORT\_C void MPVAudioInput::CancelCommand () [pure virtual]

**4.7.2.2** virtual IMPORT\_C TInt MPVAudioInput::Reset () [pure virtual]

**4.7.2.3** virtual IMPORT\_C void MPVAudioInput::SetConfigL (const TDesC8 &*aSampleRate*, const TDesC8 &*aChannels*) [pure virtual]

**4.7.2.4** virtual IMPORT\_C void MPVAudioInput::SetFormatL (const TDesC8 &*aFormat*, const TDesC8 &*aFmtSpecific*, TInt &*aMaxRequestSize*) [pure virtual]

The documentation for this class was generated from the following file:

- [pv\\_plugin\\_interfaces.h](#)

## 4.8 MPVAudioOutput Class Reference

```
#include <pv_plugin_interfaces.h>
```

### Public Methods

- virtual IMPORT\_C void [SetFormatL](#) (const TDesC8 &aFormat)=0
- virtual IMPORT\_C void [SetConfigL](#) (const TDesC8 &aSampleRate, const TDesC8 &aChannels)=0
- virtual IMPORT\_C void [CancelCommand](#) ()=0
- virtual IMPORT\_C TInt [Reset](#) ()=0

### 4.8.1 Detailed Description

MPVAudioOutput Class

MPVAudioOutput can be implemented by any audio data sink that needs to work with PV SDKs.

### 4.8.2 Member Function Documentation

**4.8.2.1** virtual IMPORT\_C void MPVAudioOutput::CancelCommand () [pure virtual]

**4.8.2.2** virtual IMPORT\_C TInt MPVAudioOutput::Reset () [pure virtual]

**4.8.2.3** virtual IMPORT\_C void MPVAudioOutput::SetConfigL (const TDesC8 &*aSampleRate*, const TDesC8 &*aChannels*) [pure virtual]

**4.8.2.4** virtual IMPORT\_C void MPVAudioOutput::SetFormatL (const TDesC8 &*aFormat*) [pure virtual]

The documentation for this class was generated from the following file:

- [pv\\_plugin\\_interfaces.h](#)

## 4.9 MPVCmnCmdStatusObserver Class Reference

```
#include <pv_common_types.h>
```

### Public Methods

- virtual [~MPVCmnCmdStatusObserver](#) ()
- virtual void [CommandCompletedL](#) (const [CPVCmnCmdResp](#) &aResponse)=0

### 4.9.1 Constructor & Destructor Documentation

**4.9.1.1** virtual MPVCmnCmdStatusObserver::~~MPVCmnCmdStatusObserver () [inline, virtual]

### 4.9.2 Member Function Documentation

**4.9.2.1** virtual void MPVCmnCmdStatusObserver::CommandCompletedL (const [CPVCmnCmdResp](#) &aResponse) [pure virtual]

The documentation for this class was generated from the following file:

- [pv\\_common\\_types.h](#)

## 4.10 MPVCmnErrorEventObserver Class Reference

```
#include <pv_common_types.h>
```

### Public Methods

- virtual [~MPVCmnErrorEventObserver](#) ()
- virtual void [HandleErrorEventL](#) (const [CPVCmnAsyncErrorEvent](#) &aEvent)=0

### 4.10.1 Constructor & Destructor Documentation

**4.10.1.1** virtual MPVCmnErrorEventObserver::~MPVCmnErrorEventObserver () [inline, virtual]

### 4.10.2 Member Function Documentation

**4.10.2.1** virtual void MPVCmnErrorEventObserver::HandleErrorEventL (const [CPVCmnAsyncErrorEvent](#) &aEvent) [pure virtual]

The documentation for this class was generated from the following file:

- [pv\\_common\\_types.h](#)

## 4.11 MPVCmnInfoEventObserver Class Reference

```
#include <pv_common_types.h>
```

### Public Methods

- virtual [~MPVCmnInfoEventObserver](#) ()
- virtual void [HandleInformationalEventL](#) (const [CPVCmnAsyncInfoEvent](#) &aEvent)=0

### 4.11.1 Constructor & Destructor Documentation

**4.11.1.1** virtual MPVCmnInfoEventObserver::~MPVCmnInfoEventObserver () [inline, virtual]

### 4.11.2 Member Function Documentation

**4.11.2.1** virtual void MPVCmnInfoEventObserver::HandleInformationalEventL (const [CPVCmnAsyncInfoEvent](#) &aEvent) [pure virtual]

The documentation for this class was generated from the following file:

- [pv\\_common\\_types.h](#)

## 4.12 MPVDataSink Class Reference

```
#include <pv_plugin_interfaces.h>
```

Inheritance diagram for MPVDataSink::

### Public Methods

- [MPVDataSink](#) (TUid aSinkType)
- virtual [~MPVDataSink](#) ()

### 4.12.1 Detailed Description

MPVDataSink Class

PV extension to MDataSource that supports basic PV requirements like exposing capabilities, configuration interfaces etc

### 4.12.2 Constructor & Destructor Documentation

**4.12.2.1** [MPVDataSink::MPVDataSink](#) (TUid *aSinkType*) [inline]

**4.12.2.2** [virtual MPVDataSink::~~MPVDataSink](#) () [inline, virtual]

The documentation for this class was generated from the following file:

- [pv\\_plugin\\_interfaces.h](#)

## 4.13 MPVDataSinkBase Class Reference

```
#include <pv_plugin_interfaces.h>
```

Inheritance diagram for MPVDataSinkBase::

### Public Methods

- [MPVDataSinkBase](#) (TUid aType)

### 4.13.1 Detailed Description

[MPVDataSourceBase](#) Class

Base class for data sinks

### 4.13.2 Constructor & Destructor Documentation

**4.13.2.1** [MPVDataSinkBase::MPVDataSinkBase](#) (TUid *aType*) [inline]

**4.13.2.2** virtual [MPVDataSinkBase::~~MPVDataSinkBase](#) () [inline, virtual]

### 4.13.3 Member Function Documentation

**4.13.3.1** virtual void [MPVDataSinkBase::BufferFilledL](#) (CMMFBuffer \* *aBuffer*) [pure virtual]

Method called by a data source to pass back an filled buffer to the sink

This is a pure virtual function that each derived class must implement. This method is used as the callback when the data sink actively requests a supplier ie a data source to fill a buffer by calling the data sources FillBufferL. When the data sink gets this callback it knows that the buffer has been filled and is ready to be emptied

**Parameters:**

*aBuffer* The buffer that has been filled by a data source and is now available for processing

**4.13.3.2 virtual TBool MPVDataSinkBase::CanCreateSinkBuffer () [pure virtual]**

Method to indicate whether the data sink can create a buffer.

This is a pure virtual function that each derived class must implement.

**Returns:**

ETrue if the data sink can create a buffer else EFalse

**4.13.3.3 virtual CMMFBuffer\* MPVDataSinkBase::CreateSinkBufferL (TMediaId, TBool &) [inline, virtual]**

Returns a buffer created by the data sink

This is a pure virtual function that each derived class must implement.

**Parameters:**

*aMediaId* This identifies the type of media eg audio or video and the stream id. This parameter is required in cases where the source can supply data of more than one media type and/or multiple streams of data.

*aReference* This must be written to by the method to indicate whether the created buffer is a 'reference' buffer. A 'reference' buffer is a buffer that is owned by the sink and should be used in preference to the source buffer provided the source buffer is also not a reference buffer.

**Returns:**

The created buffer

**4.13.3.4 virtual void MPVDataSinkBase::EmptyBufferL (CMMFBuffer \* aBuffer, MPVDataSourceBase \* aSupplier, TMediaId) [pure virtual]**

Method called by a MDataSource to request the data sink to empty aBuffer of data.

This is a pure virtual function that each derived class must implement. This method is used when a data sink is passively waiting for requests from a supplier ie a data source to empty a buffer. The data sink must call the BufferEmptiedL member on aSupplier when it has emptied the buffer of it's data - the data sink can either make this callback synchronously or asynchronously.

**Parameters:**

*aBuffer* The full buffer that needs emptying of it's data

*aSupplier* The data source that supplied the data. The data sink needs this to make the BufferEmptiedL callback on aSupplier to indicate to the data source that the data sink has finished with the buffer.

*aMediaId* This identifies the type of media eg audio or video and the stream id. This parameter is required in cases where the source can supply data of more than one media type and/or multiple streams of data

**4.13.3.5 virtual TInt MPVDataSinkBase::SinkPauseL () [inline, virtual]**

Method to 'pause' the data sink

This is a virtual function that a derived data sink can implement if any data sink specific action is required to 'pause'

**4.13.3.6 virtual TInt MPVDataSinkBase::SinkPlayL () [inline, virtual]**

Method to 'play' the data sink

This is a virtual function that a derived data sink can implement if any data sink specific action is required prior to 'playing' ie the start of data transfer

**4.13.3.7 virtual TInt MPVDataSinkBase::SinkPrimeL () [inline, virtual]**

Method to 'prime' the data sink

This is a virtual function that a derived data sink can implement if any data sink specific 'priming' is required

**4.13.3.8 virtual TInt MPVDataSinkBase::SinkStopL () [inline, virtual]**

Method to 'stop' the data sink

This is a virtual function that a derived data sink can implement if any data sink specific action is required to 'stop'

**4.13.3.9 virtual void MPVDataSinkBase::SinkThreadLogoff () [inline, virtual]**

Method to 'logoff' the data sink from the same thread that sink consumes data in.

This method may be required as the thread that the data sink is deleted in may not be the same thread that the data transfer took place in. Therefore any thread specific releasing of resources needs to be performed in the SinkThreadLogoff rather than in the destructor

This is a virtual function that a derived data sink can implement if any thread specific releasing of resources is required.

**4.13.3.10 virtual TInt MPVDataSinkBase::SinkThreadLogon (MAsyncEventHandler &) [inline, virtual]**

Method to 'logon' the data sink to the same thread that sink will be consuming data in.

This method may be required as the thread that the data sink was created in is not always the same thread that the data transfer will take place in. Therefore any thread specific initialisation needs to be performed in the SinkThreadLogon rather than in the creation of the data sink.

This is a virtual function that a derived data sink can implement if any thread specific initialisation is required and/or the data sink can create any asynchronous events.

**Parameters:**

**aEventHandler** This is an MAsyncEventHandler to handle asynchronous events that occur during the transfer of multimedia data. The event handler must be in the same thread as the data transfer thread - hence the reason it is passed in the SinkThreadLogon as opposed to say the constructor.

**Returns:**

KErrNone if successful, otherwise a system wide error code.

### 4.16.1 Detailed Description

MPVDataSourceBase Class

Base class for data sources

### 4.16.2 Constructor & Destructor Documentation

**4.16.2.1** [MPVDataSourceBase::MPVDataSourceBase](#) (TUid aType) [inline]

**4.16.2.2** [virtual MPVDataSourceBase::~~MPVDataSourceBase](#) () [inline, virtual]

### 4.16.3 Member Function Documentation

**4.16.3.1** [virtual void MPVDataSourceBase::BufferEmptiedL](#) (CMMFBuffer \* aBuffer) [pure virtual]

Method called by a data sink to pass back an emptied buffer to the source

This is a pure virtual function that each derived class must implement. This method is used as the callback when the data source actively requests a consumer ie a data sink to empty a buffer by calling the data sinks EmptyBufferL. When the data source gets this callback it knows that the buffer has been emptied and can be reused

**Parameters:**

*aBuffer* The buffer that has been emptied by a data sink and is now available for reuse

**4.16.3.2 virtual TBool MPVDataSourceBase::CanCreateSourceBuffer () [pure virtual]**

Method to indicate whether the data source can create a buffer.

This is a pure virtual function that each derived class must implement.

**Returns:**

ETrue if the data source can create a buffer else EFalse

**4.16.3.3 virtual CMMFBuffer\* MPVDataSourceBase::CreateSourceBufferL (TMediaId, CMMFBuffer &, TBool &) [inline, virtual]**

Returns a buffer created by the data source

This is a virtual function that a derived class can implement. This can be used in preference to the above CreateSourceBufferL method in cases where the source buffer creation has a dependency on the sink buffer

**Parameters:**

*aMediaId* This identifies the type of media eg audio or video and the stream id. This parameter is required in cases where the source can supply data of more than one media type and/or multiple streams of data eg a multimedia file

*aSinkBuffer* The sink buffer the nature of which may influence the creation of the source buffer

*aReference* This must be written to by the method to indicate whether the created buffer is a 'reference' buffer. A 'reference' buffer is a buffer that is owned by the source and should be used in preference to the sink buffer provided the sink buffer is not a reference buffer

**Returns:**

The created buffer

**4.16.3.4 virtual CMMFBuffer\* MPVDataSourceBase::CreateSourceBufferL (TMediaId, TBool &) [inline, virtual]**

Returns a buffer created by the data source

This is a pure virtual function that each derived class must implement.

**Parameters:**

*aMediaId* This identifies the type of media eg audio or video and the stream id. This parameter is required in cases where the source can supply data of more than one media type and/or multiple streams of data eg a multimedia file

*aReference* This must be written to by the method to indicate whether the created buffer is a 'reference' buffer. A 'reference' buffer is a buffer that is owned by the source and should be used in preference to the sink buffer provided the sink buffer is also not a reference buffer

**Returns:**

The created buffer

**4.16.3.5 virtual void MPVDataSourceBase::FillBufferL (CMMFBuffer \* *aBuffer*, MPVDataSinkBase \* *aConsumer*, TMediaId) [pure virtual]**

Method called by a MDataSink to request the data source to fill *aBuffer* with data.

This is a pure virtual function that each derived class must implement. This method is used when a data source is passively waiting for requests from a consumer ie a data sink to fill a buffer. The data source must call the BufferFilledL member on *aConsumer* when it has filled the buffer with data - the data source can either make this callback synchronously or asynchronously.

**Parameters:**

***aBuffer*** The buffer that needs filling with data

***aConsumer*** The data sink that consumes the data. The data source needs this to make the Buffer-FilledL callback on *aConsumer* when the data source has completed filling the *aBuffer*.

***aMediaId*** This identifies the type of media eg audio or video and the stream id. This parameter is required in cases where the source can supply data of more than one media type and/or multiple streams of data eg a multimedia file

**4.16.3.6 virtual TInt MPVDataSourceBase::SourcePauseL () [inline, virtual]**

Method to 'pause' the data source

This is a virtual function that a derived data source can implement if any data source specific action is required to 'pause'

**4.16.3.7 virtual TInt MPVDataSourceBase::SourcePlayL () [inline, virtual]**

Method to 'play' the data source

This is a virtual function that a derived data source can implement if any data source specific action is required prior to 'playing' ie the start of data transfer

**4.16.3.8 virtual TInt MPVDataSourceBase::SourcePrimeL () [inline, virtual]**

Method to 'prime' the data source

This is a virtual function that a derived data source can implement if any data source specific 'priming' is required

**4.16.3.9 virtual TInt MPVDataSourceBase::SourceStopL () [inline, virtual]**

Method to 'stop' the data source

This is a virtual function that a derived data source can implement if any data source specific action is required to 'stop'

**4.16.3.10 virtual void MPVDataSourceBase::SourceThreadLogoff () [inline, virtual]**

Method to 'logoff' the data source from the same thread that source supplies data in.

This method may be required as the thread that the data source is deleted in may not be the same thread that the data transfer took place in. Therefore any thread specific releasing of resources needs to be performed in the SourceThreadLogoff rather than in the destructor

This is a virtual function that a derived data source can implement if any thread specific releasing of resources is required.

#### 4.16.3.11 **virtual TInt MPVDataSourceBase::SourceThreadLogon (MAsyncEventHandler &)** [inline, virtual]

Method to 'logon' the data source to the same thread that source will be supplying data in.

This method may be required as the thread that the data source was created in is not always the same thread that the data transfer will take place in. Therefore any thread specific initialisation needs to be performed in the SourceThreadLogon rather than in the creation of the data source.

This is a virtual function that a derived data source can implement if any thread specific initialisation is required and/or the data source can create any asynchronous events.

##### **Parameters:**

***aEventHandler*** This is an MAsyncEventHandler to handle asynchronous events that occur during the transfer of multimedia data. The event handler must be in the same thread as the data transfer thread - hence the reason it is passed in the SourceThreadLogon as opposed to say the constructor.

##### **Returns:**

KErrNone if successful, otherwise a system wide error code.

- virtual IMPORT\_C void [QueryInterface](#) (const TPVUuid &aUuid, TPVInterfacePtr &aInterfacePtr)=0

### 4.19.1 Detailed Description

MPVPluginBase Class

Base class for all supported plugins

### 4.19.2 Constructor & Destructor Documentation

**4.19.2.1** virtual MPVPluginBase::~~MPVPluginBase () [inline, virtual]

### 4.19.3 Member Function Documentation

**4.19.3.1** virtual IMPORT\_C const RArray<TPVMIMETYPE \*>& MPVPluginBase::GetMultimediaTypesL () [pure virtual]

This API returns multimedia's type supported by the data source/sink - Audio, Video, Data etc. Each supported type is indicated by a MIME type structure.

#### Returns:

Multimedia types supported by the data source/sink. The reference is valid until the MPVPluginBase derived object is destroyed.

**4.19.3.2** virtual IMPORT\_C void MPVPluginBase::QueryInterface (const TPVUuid &aUuid, TPVInterfacePtr &aInterfacePtr) [pure virtual]

This API is to allow for extensibility of the plugin interface. It allows a caller to ask for an instance of a particular interface object to be returned. The mechanism is analogous to the COM IUnknown method. The interfaces are identified with an interface ID that is a UUID as in DCE and a pointer to the interface object

is returned if it is supported. Otherwise the returned pointer is NULL. TBD: Define the UUID, InterfacePtr structures

**Parameters:**

- aUuid* The UUID of the desired interface  
*aInterfacePtr* The output pointer to the desired interface

**4.19.3.3** `virtual IMPORT_C void MPVPluginBase::QueryUUID (const TPVMIMETYPE & aMimeType, RArray< TPVUuid > & aUuids, bool aExactUuidsOnly = false)` [pure virtual]

This API is to allow for extensibility of the plugin interface. It allows a caller to ask for all UUIDs associated with a particular MIME type. If interfaces of the requested MIME type are found within the plugin, they are added to the UUIDs array.

Also added to the UUIDs array will be all interfaces which have the requested MIME type as a base MIME type. This functionality can be turned off.

**Parameters:**

- aMimeType* The MIME type of the desired interfaces  
*aUuids* An array to hold the discovered UUIDs  
*aExactUuidsOnly* Turns on/off the retrieval of UUIDs with aMimeType as a base type

The documentation for this class was generated from the following file:

## 4.20 MPVVideoInput Class Reference

```
#include <pv_plugin_interfaces.h>
```

### Public Methods

- virtual IMPORT\_C void [SetFormatL](#) (const TDesC8 &aFormat)=0
- virtual IMPORT\_C void [SetFrameRateL](#) (TReal32 aFrameRate)=0
- virtual IMPORT\_C void [SetVideoFrameSizeL](#) (const TSize &aSize)=0
- virtual IMPORT\_C void [GetVideoFrameSizeL](#) (TSize &aSize) const=0

### 4.20.1 Detailed Description

MPVVideoInput Class

MPVVideoInput can be implemented by any video data source that needs to work with PV SDKs.

### 4.20.2 Member Function Documentation

#### 4.20.2.1 virtual IMPORT\_C void MPVVideoInput::GetVideoFrameSizeL (TSize &aSize) const [pure virtual]

Get the video frame size

**Parameters:**

*aSize* The video frame size, in pixels

**Exceptions:**

*Can* leave with one of the system wide error codes

#### 4.20.2.2 virtual IMPORT\_C void MPVVideoInput::SetFormatL (const TDesC8 &aFormat) [pure virtual]

Set the video frame format. This must be from the list of supported formats.

**Parameters:**

*aFormat* The mime string describing the video frame format.

**Exceptions:**

*Can* leave with one of the system wide error codes

#### 4.20.2.3 virtual IMPORT\_C void MPVVideoInput::SetFrameRateL (TReal32 aFrameRate) [pure virtual]

Set the video frame rate. This must be within the range of supported frame rates for the current frame size.

**Parameters:**

*aFrameRate* The video frame rate to set.

**Exceptions:**

*Can* leave with one of the system wide error codes

**4.20.2.4 virtual IMPORT\_C void MPVVideoInput::SetVideoFrameSizeL (const TSize & *aSize*)**  
[pure virtual]

Set the video frame size

**Parameters:**

*aSize* The video frame size, in pixels

**Exceptions:**

*Can* leave with one of the system wide error codes

The documentation for this class was generated from the following file:

- [pv\\_plugin\\_interfaces.h](#)

## 4.21 MPVVideoOutput Class Reference

```
#include <pv_plugin_interfaces.h>

### 4.21.1 Detailed Description

MPVVideoOutput Class

MPVVideoOutput can be implemented by any video data sink that needs to work with PV SDKs.

### 4.21.2 Member Function Documentation

#### 4.21.2.1 virtual IMPORT\_C void MPVVideoOutput::GetVideoFrameSizeL (TSize & *aSize*) const [pure virtual]

Get the video frame size

**Parameters:**

*aSize* The video frame size, in pixels

**Exceptions:**

*Can* leave with one of the system wide error codes

#### 4.21.2.2 virtual IMPORT\_C void MPVVideoOutput::SetFormatL (const TDesC8 & *aFormat*) [pure virtual]

Set the video frame format. This must be from the list of supported formats.

**Parameters:**

*aFormat* A mime string describing the video frame format.

**Exceptions:**

*Can* leave with one of the system wide error codes

#### 4.21.2.3 virtual IMPORT\_C void MPVVideoOutput::SetVideoFrameSizeL (const TSize & *aSize*) [pure virtual]

Set the video frame size

**Parameters:**

*aSize* The video frame size, in pixels

**Exceptions:**

*Can* leave with one of the system wide error codes

## 4.25 PVAuthorEngineFactory Class Reference

```
#include <pvauthorenginefactory.h>
```

### Static Public Methods

- OSCL\_IMPORT\_REF [PVAuthorEngineInterface](#) \* [CreateAuthor](#) ([PVCommandStatusObserver](#) \*aCmdStatusObserver, [PVErrrorEventObserver](#) \*aErrorEventObserver, [PVInformationalEventObserver](#) \*aInfoEventObserver)
- OSCL\_IMPORT\_REF bool [DeleteAuthor](#) ([PVAuthorEngineInterface](#) \*aAuthor)

### 4.25.1 Detailed Description

PVAuthorEngineFactory Class

PVAuthorEngineFactory class is a singleton class which instantiates and provides access to pvAuthor engine. It returns an [PVAuthorEngineInterface](#) reference, the interface class of the pvAuthor SDK.

The application is expected to contain and maintain a pointer to the [PVAuthorEngineInterface](#) instance at all time that pvAuthor engine is active.

### 4.25.2 Member Function Documentation

**4.25.2.1 OSCL\_IMPORT\_REF [PVAuthorEngineInterface](#)\* PVAuthorEngineFactory::CreateAuthor ([PVCommandStatusObserver](#) \*aCmdStatusObserver, [PVErrrorEventObserver](#) \*aErrorEventObserver, [PVInformationalEventObserver](#) \*aInfoEventObserver)**  
[static]

Creates an instance of a pvAuthor engine. If the creation fails, this function will leave.

#### Parameters:

- aCmdStatusObserver* The observer for command status
- aErrorEventObserver* The observer for unsolicited error events
- aInfoEventObserver* The observer for unsolicited informational events

#### Returns:

A pointer to an author or leaves if instantiation fails

**4.25.2.2 OSCL\_IMPORT\_REF bool PVAuthorEngineFactory::DeleteAuthor ([PVAuthorEngineInterface](#) \*aAuthor)** [static]

This function allows the application to delete an instance of a pvAuthor and reclaim all allocated resources. An author can be deleted only in the idle state. An attempt to delete an author in any other state will fail and return false.

#### Parameters:

- aAuthor* The author to be deleted.

#### Returns:

A status code indicating success or failure.

The documentation for this class was generated from the following file:

- [pvauthorenginefactory.h](#)

## 4.26 PVAuthorEngineInterface Class Reference

```

### 4.26.1 Detailed Description

PVAuthorEngineInterface

### 4.26.2 Constructor & Destructor Documentation

**4.26.2.1** virtual PVAuthorEngineInterface::~PVAuthorEngineInterface () [inline, virtual]

Destructor.

### 4.26.3 Member Function Documentation

**4.26.3.1** virtual [PVCommandId](#) PVAuthorEngineInterface::AddDataSink (const PVMFNodeInterface & *aDataSink*, const OsclAny \* *aComposer*, const OsclAny \* *aContextData* = NULL) [pure virtual]

Adds a media sink where output data from the specified composer will be written to. Currently this API does not cause any action as it is not relevant.

This command is valid only when pvAuthor Engine is in PVAE\_STATE\_OPENED state. The referenced composer must be previously selected.

This command does not change the pvAuthor Engine engine state.

#### Parameters:

*aDataSink* Reference to the data sink to be used

*aComposer* Opaque data identifying the composer to which the data sink will connect to.

*aContextData* Optional opaque data to be passed back to user with the command response

#### Returns:

A unique command id for asynchronous completion

**4.26.3.2** virtual [PVCommandId](#) PVAuthorEngineInterface::AddDataSource (const PVMFNodeInterface & *aDataSource*, const OsclAny \* *aContextData* = NULL) [pure virtual]

Adds a media source to be used as input to an authoring session.

This command is valid only when pvAuthor Engine is in PVAE\_STATE\_OPENED state. This command does not change the pvAuthor Engine engine state.

#### Parameters:

*aDataSource* Reference to the data source

*aContextData* Optional opaque data to be passed back to user with the command response

#### Returns:

Unique command ID to identify this command in command response

**4.26.3.3** virtual **PVCommandId** PVAuthorEngineInterface::AddMediaTrack (const PVMFNodeInterface & *aDataSource*, const PVUuid & *aEncoderUuid*, const OsclAny \* *aComposer*, PVInterface \*& *aConfigInterface*, const OsclAny \* *aContextData* = NULL) [pure virtual]

Add a media track to the specified composer.

The source data of this media track will come from the specified data source. pvAuthor engine will encoder of the specified Uuid to encode the source data. A media track will be added to the specified composer, and encoded data will be written to the composer during the authoring session.

A configuration object for the selected composer will be saved to the PVInterface pointer provided in aConfigInterface parameter. User should call queryInterface to query for the configuration interfaces supported by the encoder. Before calling [Reset\(\)](#), user must call removeRef on the PVInterface object to remove its reference to the object.

This command is valid only when pvAuthor Engine is in PVAE\_STATE\_OPENED state. The referenced data source and composer must be already added before this method is called. This command does not change the pvAuthor Engine engine state.

#### Parameters:

***aDataSource*** Data source node to provide input data

***aEncoderUuid*** Uuid of encoder to encode the source data

***aComposer*** Opaque data to identify the composer in which a media track will be added.

***aConfigInterface*** Pointer to configuration object for the selected encoder will be saved to this parameter upon completion of this call

***aContextData*** Optional opaque data to be passed back to user with the command response

#### Returns:

A unique command id for asynchronous completion

**4.26.3.4** virtual **PVCommandId** PVAuthorEngineInterface::AddMediaTrack (const PVMFNodeInterface & *aDataSource*, const PvmfMimeType & *aEncoderType*, const OsclAny \* *aComposer*, PVInterface \*& *aConfigInterface*, const OsclAny \* *aContextData* = NULL) [pure virtual]

Add a media track to the specified composer.

The source data of this media track will come from the specified data source. pvAuthor engine will select the most suitable available encoder of the specified type. A media track will be added to the specified composer, and encoded data will be written to the composer during the authoring session.

A configuration object for the selected composer will be saved to the PVInterface pointer provided in aConfigInterface parameter. User should call queryInterface to query for the configuration interfaces supported by the encoder. Before calling [Reset\(\)](#), user must call removeRef on the PVInterface object to remove its reference to the object.

This command is valid only when pvAuthor Engine is in PVAE\_STATE\_OPENED state. The referenced data source and composer must be already added before this method is called. This command does not change the pvAuthor Engine engine state.

#### Parameters:

***aDataSource*** Data source node to provide input data

***aEncoderType*** MIME type of encoder to encode the source data

***aComposer*** Opaque data to identify the composer in which a media track will be added.

***aConfigInterface*** Pointer to configuration object for the selected encoder will be saved to this parameter upon completion of this call

***aContextData*** Optional opaque data to be passed back to user with the command response

### Returns:

A unique command id for asynchronous completion

#### 4.26.3.5 virtual **PVCommandId** PVAuthorEngineInterface::CancelAllCommands (const OsciAny \* *aContextData* = NULL) [pure virtual]

Cancel all pending requests. The current request being processed, if any, will also be aborted. PVAE\_CMD\_CANCEL\_ALL\_COMMANDS will be passed to the command observer on completion. Currently this API is NOT SUPPORTED.

### Parameters:

***aContextData*** Optional opaque data that will be passed back to the user with the command response

### Returns:

A unique command id for asynchronous completion

#### 4.26.3.6 virtual **PVCommandId** PVAuthorEngineInterface::Close (const OsciAny \* *aContextData* = NULL) [pure virtual]

Closes an authoring session.

All resources added and allocated to the authoring session will be released.

This command is valid only when pvAuthor engine is in PVAE\_STATE\_OPENED state and Upon completion of this command, pvAuthor Engine will be in PVAE\_STATE\_IDLE state.

### Parameters:

***aContextData*** Optional opaque data to be passed back to user with the command response

### Returns:

Unique command ID to identify this command in command response

#### 4.26.3.7 virtual **PVCommandId** PVAuthorEngineInterface::GetLogLevel (const char \* *aTag*, **PVLogLevelInfo** & *aLogInfo*, const OsciAny \* *aContextData* = NULL) [pure virtual]

Allows the logging level to be queried for a particular logging tag. A larger log level will result in more messages being logged.

In the asynchronous response, this should return the log level along with an indication of where the level was inherited (i.e., the ancestor tag). Currently this API is NOT SUPPORTED.

### Parameters:

***aTag*** Specifies the logger tree tag where the log level should be retrieved.

***aLogInfo*** An output parameter which will be filled in with the log level information.

***aContextData*** Optional opaque data that will be passed back to the user with the command response

### Exceptions:

***memory\_error*** leaves on memory allocation error.

### Returns:

A unique command id for asynchronous completion

#### 4.26.3.8 virtual **PVAEState** PVAuthorEngineInterface::GetPVAuthorState () [pure virtual]

This function returns the current state of the pvAuthor Engine. Application may use this info for updating display or determine if the pvAuthor Engine is ready for the next command.

### Parameters:

***aState*** Output parameter to hold state information

***aContextData*** Optional opaque data to be passed back to user with the command response

### Returns:

A unique command id for synchronous completion

#### 4.26.3.9 OSCL\_IMPORT\_REF void PVAuthorEngineInterface::GetSDKInfo (**PVSDKInfo** & ***aSDKInfo***) [static]

Returns SDK version information about author engine.

### Parameters:

***aSDKInfo*** A reference to a **PVSDKInfo** structure which contains product name, supported hardware platform, supported software platform, version, part number, and PV UUID. These fields will contain info .for the currently instantiated pvPlayer engine when this function returns success.

#### 4.26.3.10 virtual **PVCommandId** PVAuthorEngineInterface::GetSDKModuleInfo (**PVSDKModuleInfo** & ***aSDKModuleInfo***, const OsclAny \* ***aContextData*** = NULL) [pure virtual]

Returns information about all modules currently used by the SDK. Currently this API is NOT SUPPORTED.

### Parameters:

***aSDKModuleInfo*** A reference to a **PVSDKModuleInfo** structure which contains the number of modules currently used by pvAuthor Engine and the PV UUID and description string for each module. The PV UUID and description string for modules will be returned in one string buffer allocated by the client. If the string buffer is not large enough to hold the all the module's information, the information will be written up to the length of the buffer and truncated.

***aContextData*** Optional opaque data that will be passed back to the user with the command response

### Returns:

A unique command id for asynchronous completion

**4.26.3.11 virtual PVCommandId PVAuthorEngineInterface::Init (const OsclAny \* *aContextData* = NULL) [pure virtual]**

Initialize an authoring session.

Upon calling this method, no more data sources and sinks can be added to the session. Also, all configuration settings will be locked and cannot be modified until the session is reset by calling [Reset\(\)](#). Resources for the session will be allocated and initialized to the configuration settings specified. This command is valid only when pvAuthor Engine is in PVAE\_STATE\_OPENED state.

Upon completion of this command, pvAuthor Engine will be in PVAE\_STATE\_INITIALIZED state, and the authoring session is ready to start.

**Parameters:**

*aContextData* Optional opaque data to be passed back to user with the command response

**Returns:**

A unique command id for asynchronous completion

**4.26.3.12 virtual PVCommandId PVAuthorEngineInterface::Open (const OsclAny \* *aContextData* = NULL) [pure virtual]**

Opens an authoring session.

This command is valid only when pvAuthor engine is in PVAE\_STATE\_IDLE state. Upon completion of this method, pvAuthor engine will be in PVAE\_STATE\_OPENED state.

**Parameters:**

*aContextData* Optional opaque data to be passed back to user with the command response

**Returns:**

Unique command ID to identify this command in command response

**4.26.3.13 virtual PVCommandId PVAuthorEngineInterface::Pause (const OsclAny \* *aContextData* = NULL) [pure virtual]**

Pause the authoring session.

The authoring session will be paused and no encoded output data will be sent to the data sink. This function is valid only in the PVAE\_STATE\_RECORDING state.

Upon completion of this command, pvAuthor Engine will be in PVAE\_STATE\_PAUSED state.

**Parameters:**

*aContextData* Optional opaque data to be passed back to user with the command response

**Returns:**

A unique command id for asynchronous completion

**4.26.3.14** virtual **PVCommandId** PVAuthorEngineInterface::QueryInterface (const PVUuid & *aUuid*, PVInterface \*& *aInterfacePtr*, const OsclAny \* *aContextData* = NULL) [pure virtual]

This API is to allow for extensibility of the pvAuthor engine interface. It allows a caller to ask for an instance of a particular interface object to be returned. The mechanism is analogous to the COM IUnknown method. The interfaces are identified with an interface ID that is a UUID as in DCE and a pointer to the interface object is returned if it is supported. Otherwise the returned pointer is NULL. TBD: Define the UIID, InterfacePtr structures

**Parameters:**

*aUuid* The UUID of the desired interface  
*aInterfacePtr* The output pointer to the desired interface  
*aContextData* Optional opaque data to be passed back to user with the command response

**Returns:**

A unique command id for asynchronous completion

**4.26.3.15** virtual **PVCommandId** PVAuthorEngineInterface::QueryUUID (const PvmfMimeString & *aMimeType*, Oscl\_Vector< PVUuid, OsclMemAllocator > & *aUuids*, bool *aExactUuidsOnly* = false, const OsclAny \* *aContextData* = NULL) [pure virtual]

Discover the UUIDs of interfaces associated with the specified MIME type and node

This API is to allow for extensibility of the pvAuthor Engine interface. User can query for all UUIDs associated with a particular MIME type. The UUIDs will be added to the aUuids vector provided by the user. Currently this API is NOT SUPPORTED.

**Parameters:**

*aMimeType* The MIME type of the desired interfaces  
*aUuids* A vector to hold the discovered UUIDs  
*aExactUuidsOnly* Turns on/off the retrieval of UUIDs with aMimeType as a base type  
*aContextData* Optional opaque data to be passed back to user with the command response

**Returns:**

A unique command id for asynchronous completion

**4.26.3.16** virtual **PVCommandId** PVAuthorEngineInterface::RemoveDataSink (const PVMFNodeInterface & *aDataSink*, const OsclAny \* *aContextData* = NULL) [pure virtual]

Removes a previously added data sink. Currently this API does not cause any action as it is not relevant.

This command is valid only when pvAuthor Engine is in PVAE\_STATE\_OPENED state. This command does not change the pvAuthor Engine engine state.

**Parameters:**

*aDataSink* Reference to the data sink to be removed  
*aContextData* Optional opaque data to be passed back to user with the command response

**Returns:**

A unique command id for asynchronous completion

**4.26.3.17** virtual **PVCommandId** PVAuthorEngineInterface::RemoveDataSource (const PVMFNodeInterface & *aDataSource*, const OsclAny \* *aContextData* = NULL) [pure virtual]

Unbinds a previously added data source.

This command is valid only when pvAuthor Engine is in PVAE\_STATE\_OPENED state. This command does not change the pvAuthor Engine engine state.

**Parameters:**

*aDataSource* Reference to the data source to be removed

*aContextData* Optional opaque data to be passed back to user with the command response

**Returns:**

A unique command id for asynchronous completion

**4.26.3.18** virtual **PVCommandId** PVAuthorEngineInterface::RemoveLogAppender (const char \* *aTag*, PVLoggerAppender & *aAppender*, const OsclAny \* *aContextData* = NULL) [pure virtual]

Allows a logging appender to be removed from the logger tree at the point specified by the input tag. If the input tag is NULL then the appender will be removed from locations in the tree. Currently this API is NOT SUPPORTED.

**Parameters:**

*aTag* Specifies the logger tree tag where the appender should be removed. Can be NULL to remove at all locations.

*aAppender* The log appender to remove.

*aContextData* Optional opaque data that will be passed back to the user with the command response

**Exceptions:**

*memory\_error* leaves on memory allocation error.

**Returns:**

A unique command id for asynchronous completion

**4.26.3.19** virtual **PVCommandId** PVAuthorEngineInterface::Reset (const OsclAny \* *aContextData* = NULL) [pure virtual]

Reset an initialized authoring session.

The authoring session will be stopped and all composers and encoders selected for the session will be removed. All data sources and sinks will be reset but will continue to be available for authoring the next output clip.

User must call removeRef() to remove its reference to any PVInterface objects received from [SelectComposer\(\)](#) or [AddMediaTrack\(\)](#) or [QueryInterface\(\)](#) APIs before calling this method. This method would fail otherwise.

This method can be called from ANY state but PVAE\_STATE\_IDLE. Upon completion of this command, pvAuthor Engine will be in PVAE\_STATE\_OPENED state.

### Parameters:

***aContextData*** Optional opaque data to be passed back to user with the command response

### Returns:

A unique command id for asynchronous completion

**4.26.3.20** **virtual PVCommandId PVAuthorEngineInterface::Resume** (const OsciAny \* *aContextData* = NULL) [pure virtual]

Resume a paused authoring session.

The authoring session will be resumed and pvAuthor Engine will resume sending encoded output data to the data sinks. This function is valid only in the PVAE\_STATE\_PAUSED state.

Upon completion of this command, pvAuthor Engine will be in PVAE\_STATE\_RECORDING state.

### Parameters:

***aContextData*** Optional opaque data to be passed back to user with the command response

### Returns:

A unique command id for asynchronous completion

**4.26.3.21** **virtual PVCommandId PVAuthorEngineInterface::SelectComposer** (const PVUuid & *aComposerUuid*, PVInterface \*& *aConfigInterface*, const OsciAny \* *aContextData* = NULL) [pure virtual]

Selects an output composer by specifying its Uuid.

pvAuthor engine the composer of the specified Uuid in the authoring session. This command is valid only when pvAuthor Engine is in PVAE\_STATE\_OPENED state. This command does not change the pvAuthor Engine state.

Upon completion of this command, opaque data to identify the selected composer is provided in the callback. The user needs to use this opaque data to identify the composer when calling [AddMediaTrack\(\)](#), [AddDataSink\(\)](#). A configuration interface for the selected composer will be saved to the PVInterface pointer provided in aConfigInterface parameter. User should call queryInterface to query for the configuration interfaces supported by the composer. When configuration is complete or before calling [Reset\(\)](#), user must call removeRef on the PVInterface object to remove its reference to the object.

### Parameters:

***aComposerUuid*** Uuid of output composer to be used

***aConfigInterface*** Pointer to configuration object for the selected composer will be saved to this parameter upon completion of this call

***aContextData*** Optional opaque data to be passed back to user with the command response

### Returns:

A unique command id for asynchronous completion

**4.26.3.22** `virtual PVCommandId PVAuthorEngineInterface::SelectComposer (const PvmfMimeString & aComposerType, PVInterface * & aConfigInterface, const OsclAny * aContextData = NULL) [pure virtual]`

Selects an output composer by specifying its MIME type.

pvAuthor engine will use the most suitable output composer of the specified MIME type available in the authoring session. This command is valid only when pvAuthor Engine is in PVAE\_STATE\_OPENED state. This command does not change the pvAuthor Engine state.

Upon completion of this command, opaque data to identify the selected composer is provided in the call-back. The user needs to use this opaque data to identify the composer when calling [AddMediaTrack\(\)](#), [AddDataSink\(\)](#). A configuration interface for the selected composer will be saved to the PVInterface pointer provided in aConfigInterface parameter. User should call queryInterface to query for the configuration interfaces supported by the composer. When configuration is complete or before calling [Reset\(\)](#), user must call removeRef on the PVInterface object to remove its reference to the object.

#### Parameters:

- aComposerType* MIME type of output composer to be used
- aConfigInterface* Pointer to configuration object for the selected composer will be saved to this parameter upon completion of this call
- aContextData* Optional opaque data to be passed back to user with the command response

#### Returns:

A unique command id for asynchronous completion

**4.26.3.23** `virtual PVCommandId PVAuthorEngineInterface::SetLogAppender (const char * aTag, PVLoggerAppender & aAppender, const OsclAny * aContextData = NULL) [pure virtual]`

Allows a logging appender to be attached at some point in the logger tag tree. The location in the tag tree is specified by the input tag string. A single appender can be attached multiple times in the tree, but it may result in duplicate copies of log messages if the appender is not attached in disjoint portions of the tree. A logging appender is responsible for actually writing the log message to its final location (e.g., memory, file, network, etc). Currently this API is NOT SUPPORTED.

#### Parameters:

- aTag* Specifies the logger tree tag where the appender should be attached.
- aAppender* The log appender to attach.
- aContextData* Optional opaque data that will be passed back to the user with the command response

#### Exceptions:

*memory\_error* leaves on memory allocation error.

#### Returns:

A unique command id for asynchronous completion

**4.26.3.24** `virtual PVCommandId PVAuthorEngineInterface::SetLogLevel (const char * aTag, int32 aLevel, bool aSetSubtree = false, const OsclAny * aContextData = NULL) [pure virtual]`

Allows the logging level to be set for the logging node specified by the tag. A larger log level will result in more messages being logged. A message will only be logged if its level is LESS THAN or equal to the

current log level. The `set_subtree` flag will allow an entire subtree, with the specified tag as the root, to be reset to the specified value. Currently this API is NOT SUPPORTED.

**Parameters:**

- aTag* Specifies the logger tree tag where the log level should be set.
- aLevel* Specifies the log level to set.
- aSetSubtree* Specifies whether the entire subtree with *aTag* as the root should be reset to the log level.
- aContextData* Optional opaque data that will be passed back to the user with the command response

**Exceptions:**

- memory\_error* leaves on memory allocation error.

**Returns:**

- A unique command id for asynchronous completion

#### 4.26.3.25 virtual **PVCommandId** PVAuthorEngineInterface::Start (const OsclAny \* *aContextData* = NULL) [pure virtual]

Start the authoring session.

pvAuthor Engine will begin to receive source data, encode them to the specified format and quality, and send the output data to the specified data sinks. This function is valid only in the PVAE\_STATE\_INITIALIZED state.

Upon completion of this command, pvAuthor Engine will be in PVAE\_STATE\_RECORDING state.

**Parameters:**

- aContextData* Optional opaque data to be passed back to user with the command response

**Returns:**

- A unique command id for asynchronous completion

#### 4.26.3.26 virtual **PVCommandId** PVAuthorEngineInterface::Stop (const OsclAny \* *aContextData* = NULL) [pure virtual]

Stops an authoring session.

The authoring session will be stopped and pvAuthor Engine will stop receiving source data from the data sources, and no further encoded data will be sent to the data sinks. This function is valid only in the PVAE\_STATE\_RECORDING and PVAE\_STATE\_PAUSED states.

Upon completion of this command, pvAuthor Engine will be in PVAE\_STATE\_INITIALIZED state.

**Parameters:**

- aContextData* Optional opaque data to be passed back to user with the command response

**Returns:**

- A unique command id for asynchronous completion

```

### Public Methods

- virtual void [CommandCompleted](#) (const [PVCmdResponse](#) &aResponse)=0
- virtual [~PVCommandStatusObserver](#) ()

### 4.28.1 Detailed Description

PVCommandStatusObserver Class

PVCommandStatusObserver is the PV SDK observer class for notifying the status of issued command messages. The API provides a mechanism for the status of each command to be passed back along with context specific information where applicable. Applications using the PV SDKs must have a class derived from PVCommandStatusObserver and implement the pure virtual function in order to receive event notifications from a PV SDK. Additional information is optionally provided via derived classes.

### 4.28.2 Constructor & Destructor Documentation

**4.28.2.1** virtual PVCommandStatusObserver::~~PVCommandStatusObserver () [inline, virtual]

### 4.28.3 Member Function Documentation

**4.28.3.1** virtual void PVCommandStatusObserver::CommandCompleted (const [PVCmdResponse](#) &aResponse) [pure virtual]

Handle an event that has been generated.

#### Parameters:

*aResponse* The response to a previously issued command.

The documentation for this class was generated from the following file:

- [pv\\_engine\\_observer.h](#)

## 4.29 PVConfigInterface Class Reference

```
#include <pv_config_interface.h>
```

### 4.29.1 Detailed Description

Base interface for all configuration classes

The documentation for this class was generated from the following file:

## 4.30 PVEngineAsyncEvent Class Reference

```
#include <pv_engine_types.h>
```

### Public Methods

- [PVEngineAsyncEvent](#) (int32 aAsyncEventType)
- [PVEngineAsyncEvent](#) (const PVEngineAsyncEvent &aAsyncEvent)
- int32 [GetAsyncEventType](#) () const

### Data Fields

- int32 [iAsyncEventType](#)

### 4.30.1 Detailed Description

PVEngineAsyncEvent Class

PVEngineAsyncEvent class is a data class to hold asynchronous events generated by the engine. The class is meant to be used inside the engine and not exposed to the interface layer or above.

### 4.30.2 Constructor & Destructor Documentation

#### 4.30.2.1 PVEngineAsyncEvent::PVEngineAsyncEvent (int32 aAsyncEventType) [inline]

The constructor for [PVEngineCommand](#) which allows the data values to be set.

##### Parameters:

- aCmdType* The command type value for this command. The value is an engine-specific 32-bit value.
- aCmdId* The command ID assigned by the engine for this command.
- aContextData* The pointer to the passed-in context data for this command.

##### Returns:

None

#### 4.30.2.2 PVEngineAsyncEvent::PVEngineAsyncEvent (const PVEngineAsyncEvent &aAsyncEvent) [inline]

The copy constructor for PVEngineAsyncEvent. Used mainly for Osci\_Vector.

##### Parameters:

- aAsyncEvent* The reference to the source PVEngineAsyncEvent to copy the data values from.

##### Returns:

None

### 4.30.3 Member Function Documentation

#### 4.30.3.1 int32 PVEngineAsyncEvent::GetAsyncEventType () const [inline]

This function returns the stored asynchronous event type value.

**Returns:**

The signed 32-bit event type value.

### 4.30.4 Field Documentation

#### 4.30.4.1 int32 PVEngineAsyncEvent::iAsyncEventType

The documentation for this class was generated from the following file:

- [pv\\_engine\\_types.h](#)

## 4.31 PVEngineCommand Class Reference

```
#include <pv_engine_types.h>
```

### Public Methods

- PVUuid [iUuid](#)

### 4.31.1 Detailed Description

PVEngineCommand Class

PVEngineCommand class is a data class to hold issued commands. The class is meant to be used inside the engine and not exposed to the interface layer or above.

### 4.31.2 Constructor & Destructor Documentation

**4.31.2.1 PVEngineCommand::PVEngineCommand** (int32 *aCmdType*, [PVCommandId](#) *aCmdId*, OsclAny \* *aContextData* = NULL, OsclAny \* *aParam1* = NULL, OsclAny \* *aParam2* = NULL, OsclAny \* *aParam3* = NULL) [inline]

The constructor for PVEngineCommand which allows the data values to be set.

#### Parameters:

- aCmdType* The command type value for this command. The value is an engine-specific 32-bit value.
- aCmdId* The command ID assigned by the engine for this command.

***aContextData*** The pointer to the passed-in context data for this command.

**Returns:**

None

### 4.31.2.2 PVEngineCommand::PVEngineCommand (const PVEngineCommand & *aCmd*) [inline]

The copy constructor for PVEngineCommand. Used mainly for Osci\_Vector.

**Parameters:**

***aCmd*** The reference to the source PVEngineCommand to copy the data values from.

**Returns:**

None

## 4.31.3 Member Function Documentation

### 4.31.3.1 PVCommandId PVEngineCommand::GetCmdId () const [inline]

This function returns the stored command ID value.

**Returns:**

The PVCommandId value for this command.

### 4.31.3.2 int32 PVEngineCommand::GetCmdType () const [inline]

This function returns the stored command type value.

**Returns:**

The signed 32-bit command type value for this command.

### 4.31.3.3 OsciAny\* PVEngineCommand::GetContext () const [inline]

This function returns the stored context data pointer.

**Returns:**

The pointer to the context data for this command

### 4.31.3.4 const PvmfMimeString& PVEngineCommand::GetMimeType () const [inline]

This function returns Mime type parameter for this command

**Returns:**

The Mime type parameter for this command

**4.31.3.5 OsclAny\* PVEngineCommand::GetParam1 () const** [inline]

This function returns the first stored parameter pointer.

**Returns:**

The pointer to the first stored parameter for this command

**4.31.3.6 OsclAny\* PVEngineCommand::GetParam2 () const** [inline]

This function returns the second stored parameter pointer.

**Returns:**

The pointer to the second stored parameter for this command

**4.31.3.7 OsclAny\* PVEngineCommand::GetParam3 () const** [inline]

This function returns the third stored parameter pointer.

**Returns:**

The pointer to the third stored parameter for this command

**4.31.3.8 PVUuid PVEngineCommand::GetUuid () const** [inline]

This function returns Uuid parameter for this command

**Returns:**

The Uuid parameter for this command

**4.31.3.9 void PVEngineCommand::SetMimeType (const PvmfMimeString & *aMimeType*)**  
[inline]

This function stores Mime type parameter of this command

**4.31.3.10 void PVEngineCommand::SetUuid (const PVUuid & *aUuid*)** [inline]

This function stores the Uuid parameter of this command

#### 4.31.4 Field Documentation

4.31.4.1 [PVCommandId](#) PVEngineCommand::iCmdId

4.31.4.2 int32 PVEngineCommand::iCmdType

4.31.4.3 OsclAny\* PVEngineCommand::iContextData

4.31.4.4 OSCL\_HeapString<OsclMemAllocator> PVEngineCommand::iMimeType

4.31.4.5 OsclAny\* PVEngineCommand::iParam1

4.31.4.6 OsclAny\* PVEngineCommand::iParam2

4.31.4.7 OsclAny\* PVEngineCommand::iParam3

4.31.4.8 PVUuid PVEngineCommand::iUuid

The documentation for this class was generated from the following file:
